

Safe & Secure Editing Software

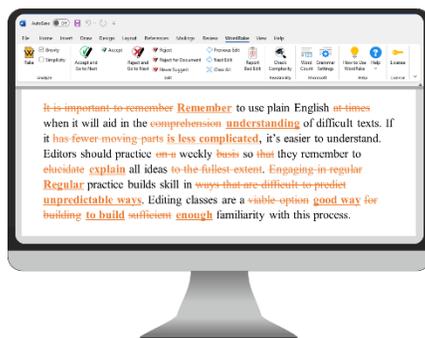

WordRake is best-in-class in-line editing software designed for professionals. In a single click, users can improve the aspects of professional writing that matter most: *brevity and simplicity*. Our editing suggestions are available in Microsoft Word and Outlook for Windows.

The Secure Choice for Editing Software

WordRake Enterprise is the preferred editing software for companies that handle confidential information. It runs exclusively on the local machine, and never communicates with the cloud or any device, ever. WordRake has passed 100% of security and confidentiality reviews, including by the US Department of Defense/The Pentagon, US Department of Justice, Microsoft, FedEx, and many of the world's largest law firms.

We Respect Your Confidential Information

WordRake does not rely on user-reported data or machine learning because it never communicates with the cloud and never tracks usage. We value your privacy and will never track your usage, record your documents, or sell your information.

Flexible and Easy Installation

WordRake Enterprise features flexible installation and licensing technology, to accommodate maximum-security environments and virtualized desktop infrastructure. The software is lightweight (only about 20 MB total), so deployment is quick and easy.

WordRake Enterprise Privacy and Security Details

No Data Collection—No Exceptions

We respect your privacy and security from the start. When you run your 14-day pilot, you'll benefit from all of the same security features as our customers. We don't (and can't) track your usage to help our sales team see which edits you accept. And whether you purchase the standard or enterprise version of WordRake, you can rest assured that there are never any exceptions to your privacy and security.

Same Features—Simplified Deployment

	WordRake (standard)	WordRake Enterprise
Licensing:	Per machine	Per user
License activation:	Requires a license key to be pasted into each machine.	License activation is automatic, in the background, no action required by user.
Cloud communication:	Briefly for license validation, when license key is entered.	Never communicates with the cloud.
Compatible with non-persistent virtualized desktops?	No	Yes

The standard version of WordRake is quick and simple to install, licensed per computer, and includes all the same editing features as the enterprise version. We provide the highest quality editing software, great service, and transparent pricing regardless of your order size.

As a privacy and data security attorney, I trust WordRake with my documents. WordRake is the perfect tool to remove legalese and cumbersome language. With its help, the privacy notices I've drafted are some of the most readable online. I'm comfortable using WordRake because the content of my documents never leaves my computer. The WordRake add-in sits locally on each user's own machine so there's no need to send my documents to a cloud server to use it.

About the Company

WordRake Holdings, LLC is a U.S. company wholly owned by U.S. citizens. The WordRake editing software was launched in 2012 and designed by writing expert and *New York Times* bestselling author Gary Kinder. The software was originally created so lawyers could focus on their legal analysis without using unnecessary verbiage, but has since been expanded to work for all types of professional writing. It was created exclusively in the U.S., by former Microsoft engineers. The company holds 12 U.S. patents for its innovative in-line editing software.
